Summary

Mapa Continental e Insular de humedales de Colombia 2015

Description

El mapa Continental e Insular de humedales de Colombia 2015, fue generado a partir de la integración de mapas temáticos de geomorfología, suelos, cobertura de la Tierra, red hidrográfica y frecuencias de inundación. Tiene una resolución espacial de 25 m, y su unidad mínima de mapeo es 25 hectáreas, lo que significa que humedales con un área inferior no son identificados (aunque se pueden dar casos excepcionales). Los límites aquí consignados deben ser tomados como indicativos, ya que su alcance es nacional, y verificarse posteriormente el trabajo a escalas de mayor detalle. Su leyenda presenta cinco categorías de humedales:

- Permanentes abiertos: humedales donde la presencia de agua es constante y no hay cobertura de árboles. Por ejemplo: lagos, lagunas, ciénagas, ríos, glaciares, etc.
- Permanentes bajo dosel: siempre están inundados y cuentan con una cobertura de bosque. Por ejemplo, los bosques inundables del Atrato, el Amazonas o los manglares.
- Temporales: la presencia de agua no es constante pero sí se presenta con cierta periodicidad, como en las sabanas inundables de la Orinoquia
